SANAD ABU SHAMA

Salfit, Palestine
abushamasanad@gmail.com · LinkedIn

OBJECTIVE

Front-End Developer with 4+ years of experience building scalable React applications, visual workflow/automation tooling, and embeddable eCommerce integrations. Experienced in API integration, internationalization (i18n), monorepo tooling, and performance optimization, with a strong focus on delivering intuitive, high-performing user experiences.

EDUCATION

Full-Stack Developer Certificate, Coding Dojo – AXSOS Academy 2022

Bachelor of Mechanical Engineering, Birzeit University 2015 – 2020

SKILLS

HTML5 · CSS3 · JavaScript · TypeScript · React.js · React Router · Material-UI (MUI) · Mobx · i18next · Nx/pnpm Monorepos · OpenAPI Codegen · Responsive Design · Component-Driven Development · Git · REST API Integration

EXPERIENCE

Front-End Developer **June 2022 – May 2026**

Coretava (formerly Gamiphy) *Ramallah, Palestine*

- Designed and built the dashboard's shared Recharts-based charting library (bar, pie, needle-gauge, and dual-axis line components) and the original 8-chart analytics module (sales, AOV, referrals, member behavior) — later reused platform-wide for campaign and audience reporting.
- Built a visual, node-based workflow builder in React for AI-driven marketing automation (CoreAds), supporting branching decision logic, audience/segment targeting, and WhatsApp messaging triggers — the platform's flagship campaign-orchestration feature.
- Maintained and extended a third-party embeddable loyalty widget (loyalty-station, 29% of all commits) across a 3+ year VTEX eCommerce platform integration (2022–2026), shipping VTEX authorization/connection-flow fixes, cart/cashback logic, and a React-runtime-isolation fix (IIFE build) to resolve host-page conflicts.
- Migrated the dashboard's legacy component library to Material-UI v7 and a modular React architecture, reducing code duplication by 20% and cutting design-to-development handoff time by 30%.
- Delivered internationalization across 4 markets (Arabic, English, Spanish, Portuguese), authoring 45% of all commits to the shared i18n package and enabling a dedicated Latin America product line.
- Shipped 750+ distinct tickets across 3,476 commits and 1,160+ code-reviewed pull requests over 4 years, as the leading contributor (37%+ of commits) to the core dashboard application.
- Built reusable, component-driven React UI systems and eCommerce features including BOGO campaign logic, discount/coupon systems, gift-card redemption, and personalized search widgets.
- Developed and consumed REST/OpenAPI-generated API clients (TypeScript) across a pnpm/Nx-orchestrated monorepo, working across multiple apps and shared packages.
- Debugged and optimized front-end performance using Chrome DevTools; ensured cross-browser compatibility and responsive behavior across desktop and mobile.
- Collaborated via PR-based code review in an agile workflow with designers and backend engineers; leveraged AI-assisted development tools (Cursor AI, Claude AI) to accelerate debugging, refactoring, and feature development.
